

*The most advanced  
OEM – ANPR/LPR Registration System in the world*

## PlateView: gives you more safety, less costs and more service

### PlateView: gives you more safety, less costs and more service

With TrafficIT 's PlateView system, you can easily add the full functionality of automatic license plate registration to you Parking, Access Control or your Video Security systems, without investing in the specific knowledge on LPR. We deliver PlateView as an OEM product, so you can print your own (product) name and logo on this product.

### The PlateView system consists of the following parts:

#### Software parts:

- TrafficIT 's central control LPR registration software
- TrafficIT 's image collection control software
- Powerful LPR software recognition engine  
(these engines are used worldwide in government tolling and red light/speeding systems)
- On customer demand, TrafficIT can offer the interface software between the PlateView system and the used Parking, Access Control or Video Security System

#### Hardware parts:

- Frame Grabber board including control software up to 4 camera's
- 1 up to 4 special IR LPR camera's (could also be delivered as an option)

### Typical advantages with PlateView in the field of Parking and Access Control are:

With permission to access on the bases of a governmental controlled ID, the license plate, a company can regulate his parking automatically with a higher security level compared to an access system based on company access acard which are easy exchangeable under "colleagues".

The use of our LPR Registration Unit on Business Parks can be a cost saving and more reliable add-on to existing Video based security applications, because of the following reasons:

- PlateView creates very reliable security calls, and
- PlateView is 14 hours a day 265 days per year on a constant high level reading licence plates

• 1 •

The special IR LPR camera registers the license plate of the approaching vehicle.

• 2 •

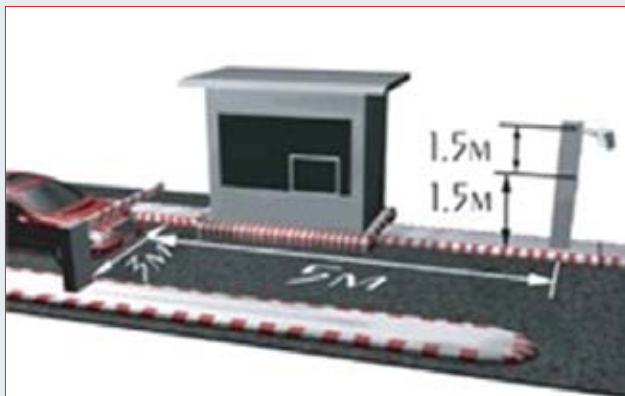

When the vehicle has stopped moving, PlateView will "translate" the image (pixel) information into computer readable text format with the license plate number;

• 3 •

The PlateView unit will forward this license plate number together with date and time stamp and IP-Plateview ID number to the connected Parking, Access Control or Video Security System. The custom to be build interface software will regulate this process.

### What makes PlateView so special?

The design philosophy behind TrafficIT is to produce modular products, which are easy to install, easy to operate and easy to maintain. You can add to the OEM PlateView unit many at TrafficIT available supplement products. With the available barriers, barrier controllers, LED displays and stand-alone Parking/Access Control software, you can extend the PlateView unit to a full operational stand-alone parking management system. Also the installation of the PlateView unit can be outsourced to TrafficIT. Besides this you can ask for a training of your personnel on the ins and outs regarding the installation of PlateView.
